

## A full scale and polish for Wright Dental's distribution centre

**Wrights Dental is Britain's oldest established full-service supplier of dental products, services and equipment, with over 100 year's clinical and business experience.**

### The Challenge

Over the last three years, Wrights embarked on a major expansion project, leading to a major re-organisation of its warehouse capacity and process flow. There was an urgent need to increase their warehouse efficiency to keep up with their rising customer demand, and maintain their excellent level of customer service.

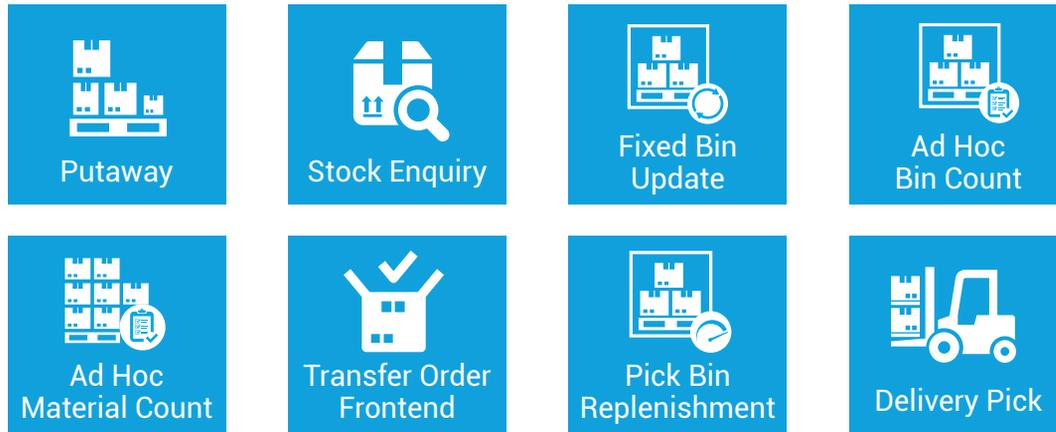

Wrights were reliant on manual paper based systems and on the knowledge of individual employees, which left them vulnerable to stock inaccuracies, bottlenecks and staff absence.

### The Solution

Full SAP WM Functionality was implemented along with a suite of SAP certified mobile apps based on the Honeywell Movilizer platform. The apps give Wrights real-time visibility of stock status and location. Manual processes have been automated and previously time consuming tasks are now as simple as scanning a barcode.

Wrights enjoys complete integration across their goods-in, stock management, picking and dispatch processes. This has alleviated bottlenecks, and allows complete traceability of stock movement throughout Wright's supply chain.

## Apps Installed

## The Result

Using SAP WM and mobilising their warehouse has made it possible for Wrights to continue to grow their business without compromising the quality of service they provide to existing customers.

**Processes are quicker and more accurate, and the changes have provided even more capacity for future expansion.**

### Plus:

- ✓ Picking accuracy has improved significantly
- ✓ Delays in goods-in, off-site stores & goods-out areas were reduced
- ✓ Dependency on individual members of staff has been removed
- ✓ Replenishment of pick locations and goods receipt are now automated
- ✓ Real-time traceability of stock has been enabled
- ✓ Accuracy and the quality of backend data has improved
