# EWM Pop-Up Warehouse Solution

# Pop-Up Warehouse Environment

Companies operating across a wide range of sectors often have a requirement for temporary warehouse space, whether this is to cater for business expansion, temporary storage while a permanent solution is being constructed or to meet seasonal peaks in demand.

Keeping investment and set up time to a minimum is key for a short-term warehouse and so establishing complex IT infrastructure goes against the principles of a temporary goods storage solution. It is important to have a reliable infrastructure, that does not rely on complex connections and can be easily taken out when no longer needed.

Businesses progressing temporary warehouses need to ensure operations are up and running as quickly as possible, with all operatives confident on the systems and procedures in place.

# Ready Built SAP EWM Solution

Working in conjunction with SAP, The Config Team has developed a unique proposition; a pre-configured SAP EWM solution that facilitates all core business processes within a warehouse environment, which can be delivered in a matter of months.

Incorporating mobile scanning as standard, the solution avoids the need for any paper-based processes and ensures it can be set up independent of IT infrastructure. With the mobile applications working with 3G / 4G technology, there is no need to implement corporate Wi-Fi infrastructure, while if Wi-Fi is already in place, it ensures all transactions can still be undertaken in any areas with Wi-Fi blackspots.

Available on either SAP S/4HANA or ECC, the out-of-the-box solution requires minimal development to cater for customer specific requirements. With the ability to be delivered in a third of the time of a full lifecycle EWM project, this innovative approach keeps investment and cost to a minimum, while getting processes in the warehouse up and running in **less than 90 days**.

This rapid deployment solution allows customers to benefit from the enhanced functionality of EWM, while only implementing the core elements needed to manage a warehouse in the short-term.

# Scope of Supply

The Config Team will provide a full end-to-end EWM solution including the EWM implementation, specially designed mobile solution, training and ongoing system and mobility support.

## Implementation of the pre-configured EWM solution

- Design of solution to meet customer requirements using core processes
- Build of solution configured to design blueprint
- Testing of all processes and transactions within SAP
- Training for super users and provision of training documentation
- Implementation and support of Go-live

## Delivery of PreBit™

A suite of mobile applications configured to work with the selected EWM Processes

- A range of out-of-the-box mobile applications for standard core processes
- A minimum of 20 users
- All set up and installation of the apps on customer devices
- End user training

## Support

Full support for the EWM solution and mobile apps.

- 20 hours of EWM system support per month
- Support to fix any bugs detected in the apps and complete necessary updates

# Processes

The core processes that are included, as standard, in the rapid deployment EWM solution include:

## Inbound Processing

- Pallet Build
- Goods Receipt and Putaway

## Outbound Processing

- Full Pallet, Case and Singles Pick
- Standard Exception Handling
- Transportation Units
- Packing and Loading

## Internal and Cross Process

- Replenishment of Fixed Bin Locations
- Physical Inventory
- Posting Change
- Scrapping
- Resource Management

# Business Benefits

## Mobile Infrastructure

To eliminate the time and cost involved with setting up corporate Wi-Fi infrastructure and negate any issues with Wi-Fi blackspots, all EWM processes and transactions can be executed on mobile devices, with all apps working with 3G / 4G.

## Rapid Deployment

This solution is pre-configured for all the core warehouse processes so requires minimal development to cater for specific customer requirements, meaning it can be delivered in a third of the time it would take for a full lifecycle EWM implementation.

## User Training

Full training support is provided to ensure all operators can be up and running as quick as possible. Tailored to each customer's requirements this can be on-site or remote training of both IT and operations teams, as well as the provision of a range of training materials.

## Complete Solution

The Config Team can provide all elements needed for an end-to-end solution, without needing multiple external suppliers, including full EWM implementation from design to delivery, a suite of mobile applications and ongoing system and mobile support post Go-live.

## Full SAP Integration

The EWM solution can be delivered on SAP ECC or S/4HANA, as standard. All processes are immediately updated in SAP in real-time for live visibility of data and transactions for informed decision making.
